About HYOSUNG

Hyosung Power & Industrial Systems PG is a division under Hyosung which consists of seven performance groups (PGs). In addition to establishing itself as a world-class manufacturer of electrical equipments, green technology and industrial machineries, Hyosung is also the largest producer of tire cords and spandex in the global market and the second largest supplier of ATMs in the USA.

01 Our Business

Brief introduction of Hyosung Power & Industrial Systems

Hyosung Power & Industrial Systems Performance Group

Hyosung Power & Industrial Systems Performance Group, a comprehensive energy solution provider, boasts world-leading technology in the global power industry and has secured a competitive capability on par with that of top competitors in transformers, switchgears, electric motors, generators, gear units, and chemical process equipment.

With globalization as one of our top priorities, we have achieved outstanding increase in sales over the past few years thanks to the enhancement in Hyosung's quality, technology, and brand recognition among overseas clients, which include North America, Europe, the Middle East, and Asia. We expect such robust performance, marked by an increasing number of orders from the overseas market, to continue in the future.

At the heart of our capability to grow as a comprehensive energy solution provider is our global organization structure. Hyosung Power & Industrial Systems Performance Group is divided into Power Systems Performance Unit and Industrial Machinery Performance Unit.

Industrial Machinery Performance Unit

The Industrial Machinery Performance Unit plays an important role in the infrastructure industry around the globe and is specialized in manufacturing all types of electric motors, generators, gear units, and chemical process equipment.

With the ability to produce motors with up to 25,000kW, we possess an automated production line capable of manufacturing more than 40,000 motors every month.

In addition, we anticipate that our efforts in innovation among rotary machinery will make significant contributions towards creating energy profitability as well as greater efficiency. With the goal to serve as a world-leading provider of industrial machinery and plant engineering, we will continue to focus on innovative energy conservation technology, enhanced reliability of new products, and development of new technologies.

02 Sustainability

Our sustainability principles are the backbone of the way we design and manufacture products

Quality Assurance

Hyosung strives for excellence. We believe excellence can only be achieved through absolute quality and value for customers. In order to create quality products, we believe that all of the actions of every single employee must be focused in the highest level of quality. In order to achieve such levels, we have implemented a quality assurance policy and programs that make our philosophy into a reality. Our Quality Assurance Policy was founded based on the management policy of the president and meets the demands of ISO 9001. As a globally active company, we are committed to comprehensive and quality management through three quality strategies: quality management system, customer-focused management system, and concentration on core competencies. The comprehensive quality management system ensures that we completely comply with all compliances and applicable legislation, codes, and standards in addition to implementing efficient operation of our management resources to eliminate unnecessary waste. Our customer-focused management system clarifies and simplifies our first priority which is customer satisfaction. All of our work is aimed to exceed customer needs and provide exceptional value through quality standards, flexibility, and innovation. Finally, we concentrate on our core competencies for strict quality control and continual improvement which provides quality products and cost-saving to our clients via advancement in technical capacity and technological innovation. We implement our policy via a Quality Management Team manages research laboratories, including the Measurement Standard Laboratory, the Chemical Analysis Laboratory and the Material Analysis Laboratory to maintain a strict control over quality.

Environment Protection Policy

Hyosung understands the impact of Hyosung's activities in the environment and works to protect the environment from pollution, manages the environmental impacts of Hyosung's products and technologies, and prevents future pollution and harmful effects in the environment by investing in environmentally-friendly products and solutions.

Based on this eco-philosophy of shared responsibility, Hyosung has implemented a comprehensive environmental protection program that aims to minimize our impact on the environment and conserve resources. Our environmental policy fulfills all requirements of the ISO 14001.

03 R&D

Inspiring innovation, creation and expertise

Hyosung R&D Center identifies innovation, creation, and expertise as core value, and concentrates on world class R&D activities in the 21st century with a philosophy aspiring after customer satisfaction, quality priority, and performance orientation. Hyosung pursues to be the world's best company in the field of heavy electrical machinery, industrial & electrical electronics engineering, and energy system. Ever since establishment in 1978, R&D Center had led the development of domestic technology. Along with the Anyang and Changwon labs, the group has endeavored to produce core technology and world-class products in the areas of heavy electrical machinery, energy system, electrical electronics engineering, and industrial automation system.

Research Areas

Hyosung R&D Center engages in the activities in the field of energy system, solution & service, applied electrical and electronic technology, basic core technology, technology of improved reliability, core components, and new materials.

Energy System

- Renewable energy (wind system, wind turbine, wind PCS, solar system, PV PCS, fuel cell, co-generation)
- Electric Vehicle (EV charger, EV motor)

Solution & Service

- Power facility diagnosis algorithm and system
- Power facility lifecycle evaluation system
- Service solution for remote diagnosis for prevention

Applied Electrical & Electronic Technology

- Power conversion system
- Flexible AC transmission system and high voltage direct current
- Power quality solution

Basic Core Technology

- Fortified technology in structural dynamics, electromagnetics, heat transfer analysis, etc.
- Skills for system simulation, analysis and evaluation
- Business support technology

Technology with Improved Reliability

- Test data analysis and testing facility
- Analysis of lifecycle and cause of error
- Reliability assessment (environment-friendliness, durability, long-term degradation, and more)

Core Components and New Materials

- Organic and inorganic insulation materials
- Silicon forming technology
- Intelligent sensor (facility diagnosis, CT, PT, VT, LA, and more)

General Information

Hyosung's LF and LT Series MV motors are designed for high efficiency and low temperature rise.

Frame No.	280	315	355	400	450	500	560	630	710	IEC		
Standard	AC 3 phase squirrel cage induction motor											
Type	3.0kV, 6.0kV / 50Hz											
Voltage & Frequency	3.3kV, 4.16kV, 6.6kV / 60Hz											
Max. Rated power	LF Series	~ 2350kW										
	LT Series			~ 10200kW								
Ambient temperature	-20 ~ 40°C											
Insulation class & Temperature rise	F / B											
Altitude	1000m a.s.l											
Degree of protection	IP55											
Type of construction	IM 1001 (B3)											
Frame material	LF Series	Cast iron										
	LT Series			Fabricated steel								
Enclosure & method of cooling	LF Series	Totally enclosed fan cooled type - IC411										
	LT Series			Totally enclosed air-to-air cooled type - IC611								
Rotor bar type	LF Series	Copper bar										
	LT Series			Copper bar								
Starting method	Direct on line											
Bearings	LF Series	Anti-friction type (grease) or sleeve type (oil bath)										
	LT Series	Anti-friction type (grease) or sleeve type (oil bath)		Anti-friction type (grease) or sleeve type (forced feed oil)								
Direction of rotation	Clockwise or Counter-clockwise											
Vibration	$\leq 2.3 \text{mm/s rms}$ (acc. to IEC 60034-14)											
Protection of windings	R.T.D (PT 100 Ω)											
Protection of bearings	R.T.D (PT 100 Ω)											
Anti-condensate heater	Included (Wired to an auxiliary terminal box as basic design)											

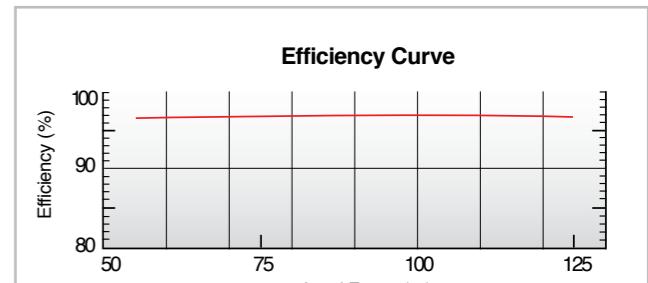

LF and LT Series are for general use. They are suitable for constant speed operation and standard inertia such as pumps, fans, compressors and blowers, etc.

Hyosung Motors can meet technical specifications including vibration, noise, accessories according to customers' requirements.

Protection degree of IP55 motors can operate in dusty environment.

Higher Efficiency is Our Promise to Customers

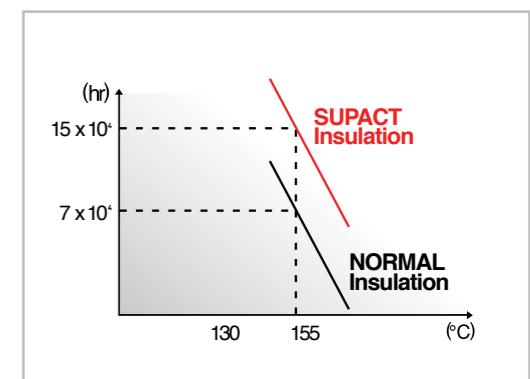

The importance of motor efficiency cannot be overstated, since electric motors use approximately 70% of all energy consumed. Using higher efficiency motors means a lower cost to operate.

LF & LT series minimized internal losses by optimizing design of electromagnetic field and flow with unique design software we've developed, achieving world class level of efficiency. Even in the range from 75% to 100% of load, where most of applications are in operation, our LF & LT series motors keep almost flat but still high efficiency as you can find in the curve.

Excellent Insulation System is the Basis of Long Life Span

Insulation design and materials are the most important factors in the life span of large motors. Ability of an insulation to resist temperature and environmental attacks yields long life. Hyosung's design approach minimizes degradation of the dielectric strength of the insulation system contributing to increased lifespan.

On the LF & LT series machines, our Class F Insulation system has thermal performance rating that approaches full class H(180°C) systems due to our unique SUPACT insulation system. The process of vacuum pressurized impregnation with heat-resisting MICA tape and non-solvent based epoxy resins allows us to endure continuous operation at high temperatures without degradation. Our standard for VFD operation is to design for one voltage class higher and includes corona treatment.

Be at the First to Reduce the Noise and to Improve Your Working Environment

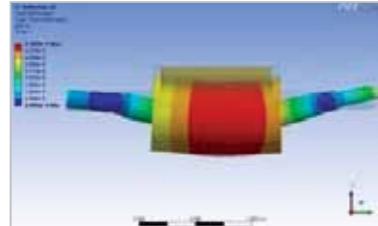

We care about operators' working environment. Our LF & LT series motors comply with international health & safety regulation especially in noise levels. Thanks to the ideal slot combination and power analysis design software, we can minimize electromagnetic power losses and therefore lower our operating noise.

We combine fractional harmonic wave noise reduction at non-drive end of LF & LT series and use sound-absorbing materials inside of the motor frame to complete the noise reduction system.

Why Hyosung Motors?

Leading the World best

Optimized Shaft Design for Stable Operation

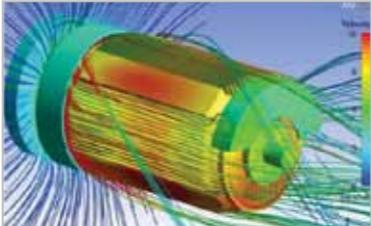

<Static Deflection Analysis>

LF & LT series limit the static deflection under 10%, increasing the shaft stiffness by using heat treatment materials, so that it can be suitably used for the driven machines requiring high starting torques.

Insulated bearings are provided to prevent the bearing pitting due to the shaft currents. LF & LT series motors?

Of course, YES!

Improved Cooling Structure

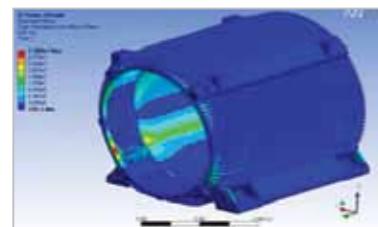

LF series' extended fin height on the frame and the longer fin design at the bracket improve cooling by promoting effective air flow between fins.

LF series incorporates a special cover at the drive end for more efficient cooling structure. The cover guides the air flow to assist bearing cooling at the drive end resulting in lower bearing temperature rise. This also helps keep hot air from driven machinery from heating the bearing.

Internal structure is designed to promote improved cooling and reduce noise levels. LF series' ventilation structure is formed as streamlined shape which increases the cooling efficiency while also decreasing noise level.

Enhanced Durability with Cast Iron Frame

<Frame stiffness analysis for the maximum torque>

Fundamental function of frame is to protect windings from external impact and foreign substances. As stiffness is very important, LF series applies cast iron frame up to 560 frame. Especially gray cast iron(ISO 250, DIN No. 0.6025, COPANT FG250) which is sturdy and anticorrosive increase mechanical safety and reliability.

Reliable Bearings

LF series motors are equipped with anti-friction bearings with grease lubrication which are of SKF, NSK, FAG or equivalent.

For LT series, 2-pole & 4-pole motors up to 500 frame are available with self-lubricated sleeve bearings, whereas others are available with both anti-friction type and sleeve type with forced oil lubrication.

Sleeve bearings are supplied by Renk or equivalent.

Totally Enclosed Fan Cooled, Squirrel Cage

Specifications

- **Enclosure** : Totally Enclosed
- **Rotor Type** : Squirrel Cage
- **Number of Poles** : 2 ~ 8 Poles
- **Voltage** : 2 ~ 7.2 kV
- **Output Range** : 120 ~ 2,350 kW
- **Frame Size** : 280 ~ 560 Frame
- **Degree of Protection** : IP55 (IEC60034-5)
- **Method of Cooling** : IC411 (IEC60034-6)
- **Insulation / Temp. Rise** : F / B
- **Type of Construction** : IM B3

Tolerance & Derating Factor

On-line Technical Support System

Tolerance for Performance Data (IEC60034-1)

Factor	Range
Efficiency	-10% (1-eff.)
Power Factor ($\cos\phi$)	-1/6 (1- $\cos\phi$)
	Min 0.02 ~ max 0.07
Locked Rotor Torque (kg·m)	-15%, +25%
Max Torque (kg·m)	-10%
Locked Rotor Current (A)	+20%
Moment of Inertia ($\text{kg}\cdot\text{m}^2$)	$\pm 10\%$
Slip	$\pm 20\%$

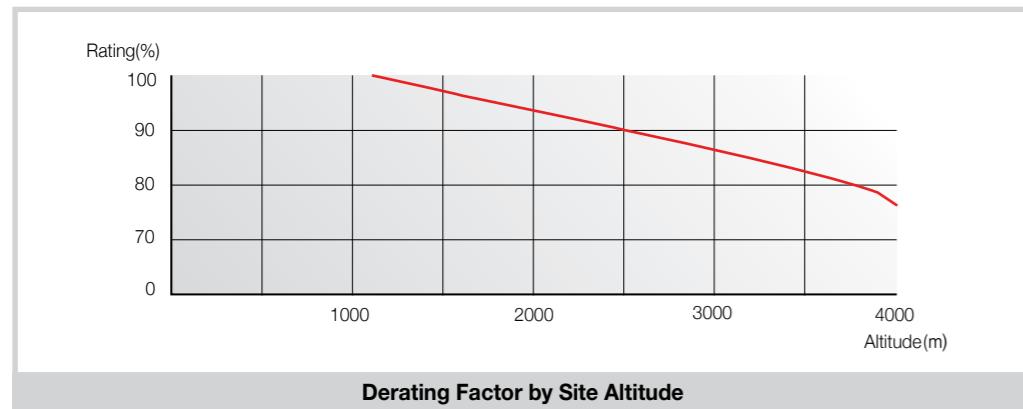

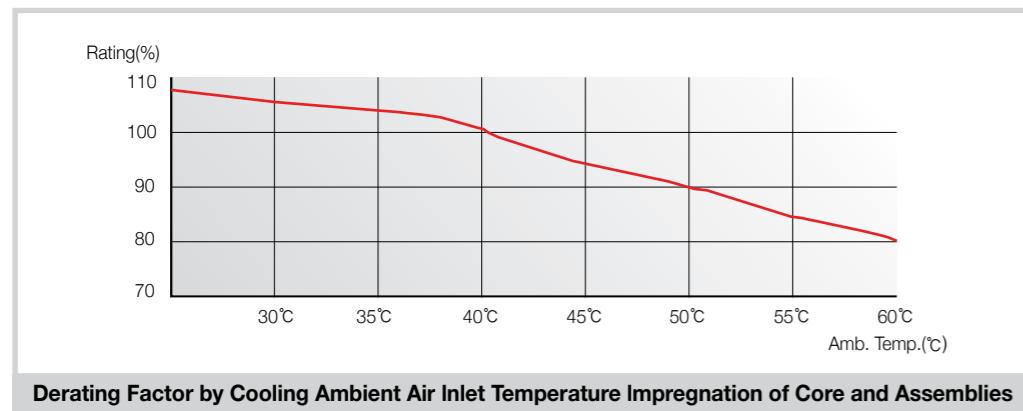

* No Load Current (A) : +30% acc. to Hyosung Standard

* Noise : +3dB(A) acc. to Hyosung Standard

Tolerance for Dimensions (IEC60034-1)

Factor	Range
Center Height	$\sim 560\text{Fr.}$ $630\text{Fr.} \sim$
	0 ~ -1.0 0 ~ -1.5
Shaft Diameter (Above 55Φ)	m6
Shaft End Play (Sleeve Type)	$\pm 4.5\text{mm}$
Width of Key	h9
Width of Key Way (DE)	h9

Modification of Output

At our website (www.hyosungpni.com), you can check and download technical datasheets, dimensional drawings and terminal box drawings. Simply input basic technical information of the motor that you need and download them for your quick reference.

- ① Visit 'www.hyosungpni.com'.
- ② Select your language.
- ③ Go to 'Products & Solution > Industrial Machinery'.
- ④ Go to 'High Voltage Motors'.
- ⑤ On the left side you will find 'Technical Support'.
- ⑥ Fill in the blanks with your motor specification.
- ⑦ Click 'Search'.
- ⑧ Click 'Datasheet' or drawing numbers right in the table.
- ⑨ Drawings can also be found by clicking drawing number in the datasheet.

Optional Design & Test

Manufacturing Facilities

Custom Designs are Available

Customized designs can be applied upon request.

- Change of ambient temperature
- Inverter duty
- Direction of rotation (clockwise, counter-clockwise or bi-direction)
- DE bearing insulation (NDE bearing is insulated as basic design.)
- Change of bearing type (from anti-friction to sleeve, if applicable)
- Special terminal box (phase segregated type, elastimold type etc.)
- Change of location of the terminal box
- Special painting system
- Instrumentation & auxiliary terminal box
 - RTD's for bearings & windings, Transmitters
 - Vibration sensors, Current transformers
 - Surge arrestors & capacitors
 - Separate terminal boxes for space heater & RTD's
- Special packing
- Specified performance requirements such as current, torque etc.

Test Description

Each motor receives standard routine commercial tests as required by IEC.
An unwitnessed routine test will be performed at no charge to all motors ordered.

1. Routine test

- Measurement of resistance of stator winding with DC, referred to 20°C (IEC 60034, IEEE 112)
- No-load test (IEC 60034) (measurement of no-load current and no-load losses at rated voltage and rated frequency)
- Insulation resistance test of stator/rotor winding (IEEE 43)
- Verification that phase sequence agrees with terminal markings
- Measurement and evaluation of vibrations (IEC 60034)
- Mechanical balance
- High voltage test (IEC 60034)

2. Complete test

- Routine test
- Determination of efficiency at full, 3/4, and 1/2 load (IEEE 112 F method)
- Determination of power factor at full, 3/4, and 1/2 loads (IEEE 112 F method)
- Temperature run by dual frequency method (IEC 61986, IEEE 112)
- Locked rotor current (Logarithmic proportion method)
- Determination of locked rotor and breakdown torques
- Sound pressure test

Optional Tests

- Sample coil test
- Bearing temperature rise test
- Others upon customer's request
